New York, NY 11106
(612) 232-7354

SUMMARY

I am an electrical hardware design engineer who understands how hardware interfaces to high and low-level software. Experienced in the design of complex miniature electromechanical mobile devices.

EDUCATION

University of Minnesota, Minneapolis

- Master of Science in Electrical Engineering June 2012
Thesis: *Energy-Efficient Designs and Principles for Miniature Mobile Robotic Systems*
- Bachelor of Science in Mathematics May 2007
- Bachelor of Electrical Engineering Dec. 2006

WORK EXPERIENCE

Center for Distributed Robotics

http://distrob.cs.umn.edu

Dec. 2003 – Aug. 2011

Research Assistant

- Collaborated with electrical, mechanical, and software engineers on a wide range of projects
- Integrated Li-ion smart-battery technology into 5 different (custom and commercial) robotic platforms
- Presented research projects to academic institutions, companies and other organizations
- Established a Robotics Technology Camp and outreach program for junior high-school students
- Led all electrical engineering efforts around several complex mobile robots, from concept to production - including architecture, design and manufacturing.
- Designed and realized all electronics onboard a mobile underwater robotic system to assess water contaminants - in response to the Deepwater Horizon Gulf Oil spill of Summer 2010
- Designed and developed a reconnaissance robotic platform, from which we formed ReconRobotics Corp.
- Authored journal articles, conference papers, and grants
- Interviewed, managed, and supervised new students

ReconRobotics Corp.

www.reconrobotics.com

Mar. 2005 – Jan. 2007

Co-founder, Owner, Shareholder

- Co-founded the company
- Wrote initial market assessment
- Designed, implemented, and optimized analog, digital and Radio Frequency (RF) circuits in the systems
- Conducted product demonstrations, and coordinated trade show exhibitions of products

AWARDS

- Full graduate research assistantship funding [from Sept. 2007 to Aug. 2011]
- Graduate student essay scholarship awarded to attend the International Conference on Robotics and Automation in Japan [May 2009]
- Recipient of an Undergraduate Research Opportunity Program (UROP) grant [Apr. 2004]
- Awarded study abroad essay scholarship for a computer graphics global seminar in China [May 2004]

SKILLS

Proficiencies:

- Native in English and Greek (bilingual); basic French
- Experienced in electromechanical system development
- Experienced in the entire PCB realization process – from design and layout, to contracting designs to board houses [for fabrication] and assembly houses [for population]
- Board-level hardware and software design and prototyping of miniature embedded systems
- Mathematical problem formulation, modeling, electrical design optimization

Hardware:

- Multi-layer PCB design and layout for complex robotic systems
- EMI and EMC analysis in circuit designs
- Power converters and distribution, battery management, motor control, analog and digital circuits
- Over 5 years experience designing with Texas Instruments *bq*-family Li-ion fuel-gauges
- SMBus and I²C communication interfacing to sensors and ICs
- Experience designing with Gumstix single-board computers

Software Design:

- Solid understanding of Eagle EDA layout editor; ORCAD and PSPICE Cadence software design suites
- Well-versed in MATLAB programming, and most MathWorks Toolkits
- Some experience with Agilent's ADS EDA
- Comfortable with C, C++, assembly, and Linux/UNIX
